SUMMARY

Full Stack Software Engineer with expertise in **Java/Python**, event-driven microservices, and cloud-native development on **GCP and AWS**. Proven track record in building scalable backends, designing secure RESTful APIs, and automating CI/CD pipelines. Strong advocate for clean code, test automation, and collaborative engineering practices.

WORK EXPERIENCE

Truxel AB

Software Engineer (Part-time Intern → Full-time)

Apr 2024 - Present

Uppsala, Sweden

- Architected scalable **Python backend services** and secure **RESTful APIs** for real-time streaming and data ingestion using **PostgreSQL (TimescaleDB)**.
- Deployed enterprise-scale microservices using **Docker and Kubernetes**, incorporating structured logging and real-time observability pipelines.
- Built **event-driven backend systems** using **MQTT** and message queues to monitor telemetry and track revenue across 70+ energy sites.
- Developed **data-driven forecasting services** for automated bidding workflows, boosting market revenue by 10% while ensuring high data integrity.
- Automated **CI/CD pipelines via GitHub Actions** and optimized distributed workflows, reducing production bugs by 40% and pipeline failures by 15%.
- Led end-to-end development of responsive, type-safe UI features for real-time visualizations using **React.js and TypeScript**.
- Maintained high engineering standards through comprehensive **code reviews** and the implementation of architectural best practices.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate [link](#)

Database Design and Basic SQL in PostgreSQL (University of Michigan) [link](#)

Intermediate PostgreSQL (University of Michigan) [link](#)

SKILLS

Languages: Java (Spring Boot), TypeScript, Python, Node.js, C, SQL

Test Automation & BDD: JUnit, integration testing (85% coverage projects), GitHub Actions CI/CD

Backend: Spring Boot, FastAPI, Node.js, REST APIs, event-driven systems, Kafka (familiar)

Cloud & DevOps: GCP, AWS, Docker, Kubernetes, GitHub Actions, Linux

Databases/Caching: PostgreSQL, MySQL, TimescaleDB, MongoDB, Redis

Frontend: React.js, TypeScript, TailwindCSS

Security: JWT, OAuth2, secure API design, input validation

Architecture: Microservices, Event-driven systems (MQTT), WebSockets

EDUCATION

Uppsala University

Master of Computational Science

Uppsala, Sweden

Sep 2022 - Mar 2025

Relevant coursework: Machine Learning, High Performance Programming, Parallel and Distributed Programming (OpenMPI, CUDA), Software Architecture, Algorithm Design.

Master Thesis: Self-supervised representation learning for Micro-CT images

Developed deep learning models in PyTorch for high-dimensional image analysis on HPC clusters.

Dalian University of Technology

Bachelor of Engineering

Key Achievements: Third Prize in Advanced Mathematics Competition.

Dalian, China

Sep 2017 - Jun 2021

PROJECT EXPERIENCE

Distributed Merchant Payment Platform

2026 - Present

Java, Spring Boot, Redis, PostgreSQL, React, TypeScript

- Designed and implemented a full-stack payment platform with **Spring Boot RESTful APIs** and a **React/TypeScript** dashboard, owning the complete stack from API design to UI delivery.
- Implemented secure, idempotent payment APIs using **Redis-based request deduplication** to ensure transaction consistency; integrated **unit/integration tests with JUnit** achieving 85% coverage.
- Designed event-driven transaction processing using message queues to decouple payment workflows and notification services.

Coco Notes System (Enterprise-grade Backend)

2025

Java, Spring Boot, MySQL, JWT, Redis, WebSocket

- Designed and implemented a **RESTful** backend using **Java Spring Boot** following layered architecture (Controller-Service-Repository).
- Implemented secure authentication and authorization using **JWT** and email verification workflows.
- Integrated Redis caching to reduce database load and cut response latency by 60% for frequently accessed resources.
- Implemented real-time notifications using **WebSocket** messaging for collaborative user updates.
- Designed MySQL schema and optimized query performance using indexing and caching strategies.

Real-Time Market Data Analytics Platform

2024

Python, Flask, React, PostgreSQL, REST API, Redis

- Built cloud-scalable data pipelines processing high-volume time series market data across distributed sources, using tree-based hierarchies for real-time data aggregation.
- Designed **RESTful APIs** with optimized storage/caching strategies in **Redis** for high-throughput time-series queries, ensuring low-latency data delivery to the **React** frontend.
- Architected the full stack end-to-end, from ingestion pipeline through API layer to interactive frontend dashboard, demonstrating ownership across all layers of a production grade web platform.

LANGUAGES

English: Fluent (business level)

Swedish: B1 (in progress)

Japanese: JLPT N2 certified

Chinese (Mandarin): Native, fluent (business level)
